<i>Preface</i>	v
----------------------	---

Part One: PHILOSOPHICAL BASIS AND HISTORICAL ANALYSIS

Chapter 1. PHILOSOPHY AND PHYSICS	1
1. Historical fragments and views of the past	1
1.1. <i>Antique philosophy</i>	1
1.2. <i>Indian philosophy</i>	3
1.3. <i>Chinese philosophy</i>	4
1.4. <i>Philosophical views of some European thinkers (to the middle of the 17th century)</i>	6
2. Origins of the European philosophical foundation of the atomic and quantum mechanics notions	9
2.1. <i>Ideology of positivism; Phenomenologism</i>	9
2.2. <i>Machism</i>	10
2.3. <i>Neopositivism</i>	12
2.4. <i>Postpositivism</i>	15
2.5. <i>General semantics</i>	16
2.6. <i>The analytical philosophy or philosophy of the linguistic analysis</i>	22
2.7. <i>Operationalism</i>	23
2.8. <i>Other philosophical trends</i>	23
2.9. <i>Schizoanalysis</i>	28
2.10. <i>Schizologic</i>	28
3. Hegel's dialectics	30
4. The philosophical systems and dialectical philosophy	39
5. The dialectics of interrelation of man and the Universe	40

6. Some reflections on the philosophical situation in science and art of the 20th century	42
7. Should physics follow metaphysics or dialectics?	46
8. The general philosophical principles of cognition of nature	48
9. Logical and philosophical aspects of the physical metric – the way to the informal, dialectical cognition of the Universe	54
9.1. <i>Elements of metric</i>	54
9.2. <i>The subjective and objective metrics of most important measures of electrodynamics; the nature of the charges</i>	63
9.3. <i>The main measures of SI</i>	71
9.4. <i>Binary notions in the spherical field of exchange of matter-space-time</i>	78
9.5. <i>The wave discreteness</i>	80
9.6. <i>The nature of charge and of the electrostatic field</i>	81
9.7. <i>The gram as the measure of embeddedness of space in itself and the nature of electron and proton masses</i>	83
9.8. <i>The gravitational shell of an electron</i>	90
9.9. <i>A comparison of possibilities of formal and dialectical logics for description of electron's parameters</i>	91

Chapter 2. ON THE HISTORY OF ATOMIC NOTIONS

1. Chronicle of events before the 1911-year	95
2. Rutherford's work of the 1911-year	101
3. Continuation of the chronicle: years 1912-1950, and 1996.....	103
4. History of the periodic law; important landmarks	111

Chapter 3. AN ANALYSIS OF THE BASIC CONCEPTS OF QUANTUM MECHANICS AND NEW (DIALECTICAL) SOLUTIONS FOR THE FIELD OF A STRING AND H-ATOM

1. Schrödinger's equation and the myths of quantum mechanics	119
2. Ψ -Function of the wave field of a string	130
3. Parameters of the wave field of a string and Balmer's formula	147
4. The mathematical basis of the hydrogen atom using the wave equation of matter-space-time	150
4.1. <i>The spherical wave field of H-atom</i>	152
4.2. <i>The cylindrical wave field of H-atom</i>	157
5. Hydrogen atom by Schrödinger's equation	163

Chapter 4. THE MYTHS OF MODERN PHYSICS AGAINST THE BACKGROUND OF DIALECTICAL PHYSICS SOLUTIONS	187
1. Dirac's vacuum as a result of absolutism of energy and the myth about the electron spin	187
2. Matter, space, time and the myths of electrodynamics, atomic nucleus, and relativity theory	191
2.1. <i>The physical sense of matter</i>	191
2.2. <i>The main parameters of the wave physical space: the amount of space M, kinetic (E and B) and dynamic (D and H) vectors</i>	193
2.3. <i>The volumetric rate of exchange of physical space e (the electron charge) and the electron mass m_e</i>	194
2.4. <i>The vector of the wave speed E</i>	195
2.5. <i>The rate of exchange of momentum, F; the laws of central exchange</i>	196
2.6. <i>The veritable wave parameters of the electron</i>	198
2.7. <i>The Rydberg constant</i>	199
2.8. <i>The parameters of the cylindrical field of exchange of space; the vectors of the field</i>	200
2.9. <i>The parameters of exchange of the elementary spherical-cylindrical field-space</i>	204
2.10. <i>The mass and density of the H-atom, Rutherford's nucleus, and other elementary particles</i>	208
3. The real and imaginary numerical fields and the material-ideal structure of space-time	212
4. The universal law of exchange of matter-space-motion-rest and Newton's laws ..	215

Part Two: ESSENTIAL PRINCIPLES

Chapter 5. DIALECTICS OF POSSIBILITY, REALITY, AND PROBABILITY	221
1. Introduction	221
2. Possibility and reality	221
3. Probability	224
4. The nature of wave of qualitative probability	225
5. The correlation of possibility and reality with rest and motion	225
6. The description of possibility and reality in the language of dialectical judgements <i>Yes</i> and <i>No</i>	226
7. The dialectical numerical field of reality-possibility	228
8. Conclusion	230

Chapter 6. WAVE FIELDS OF MATTER-SPACE-TIME	231
1. The notions of physical and reference spaces	231
2. The basic notions on physical spaces	233
3. Potential and kinetic fields of possibility and reality	238
4. Physical and mathematical times	244
5. The wave equation of time field-space	246
6. The physical space	250
7. The physical mass space	254
8. The wave space-field of possibility and reality	256
8.1. <i>Introduction</i>	256
8.2. <i>Phase and energetic probabilities; the probability potential</i>	256
8.3. <i>The radial shells of the wave spherical field of possibility and reality</i>	259
8.4. <i>The polar and azimuth components of amplitude of the probabilistic potential</i>	263
8.5. <i>The periodic law of atomic structures</i>	281
8.6. <i>Probabilistic elements-isotopes</i>	286
8.7. <i>The structure of some isomers</i>	288
9. The structure of crystals as the reflection of the kinematic space geometry of the wave field-space of possibility and reality	291
Chapter 7. FUNDAMENTAL PARAMETERS AND THE WAVE EXCHANGE IN FIELDS OF MATTER-SPACE-TIME ...	301
1. Waves of matter-space	301
1.1. <i>A wave process from the dialectical point of view</i>	301
1.2. <i>The characteristic parameters of wave fields</i>	303
1.3. <i>Schrödinger's first key error</i>	305
2. Masses and charges as the measures of exchange	306
2.1. <i>A philosophical sense of the words, "mass" and "charge"; a dialectical physical model of elementary particles</i>	306
2.2. <i>The central (longitudinal) exchange</i>	307
2.2.1. <i>Mass of the central exchange; the associated nature of mass</i>	307
2.2.2. <i>Mass density</i>	310
2.2.3. <i>Fictitious associated masses</i>	311
2.2.4. <i>Kauffman's experiments</i>	313
2.2.5. <i>The myths of Einstein's fictitious and empty mathematical spaces</i>	314
2.2.6. <i>The absoluteness and relativity of motion and rest – the fundamental law of the field of matter-space-time and dialectics (The myths of Einstein's relativity theory)</i>	317
2.2.7. <i>The central charge</i>	323
2.2.8. <i>The elementary law of central exchange</i>	324
2.2.9. <i>The mutual conjugation of micro- and macroworld</i>	326
2.3. <i>The transversal exchange</i>	327

2.3.1. <i>The field-space of the transversal exchange</i>	327
2.3.2. <i>Mass and charge of the transversal exchange</i>	330
2.3.3. <i>Circulation and the transversal charge</i>	332
2.3.4. <i>The elementary laws of transversal exchange and the remaining errors of the 19th century</i>	333
3. <i>The circular motion as an example of an elementary longitudinal-transversal field of rest-motion</i>	336
3.1. <i>The mean values of variable parameters and of parameters of exchange of a harmonic potential-kinetic oscillator</i>	336
3.2. <i>Some parameters of oscillations of a harmonic potential-kinetic oscillator</i>	338
3.3. <i>The circular kinematic field of motion-rest</i>	339
3.3.1. <i>The potential-kinetic radius-vector of motion-rest. Vector and scalar forms of potential-kinetic parameters</i>	339
3.3.2. <i>The kinetic-potential velocity of motion along a circumference</i>	342
3.3.3. <i>The kinematic flow and circulation in the circular motion</i>	343
3.3.4. <i>The flux density; the rotor-divergence</i>	345
3.3.5. <i>Accelerations</i>	346
3.4. <i>The circular dynamic field of motion-rest</i>	346
3.4.1. <i>The vector of potential-kinetic state in the circular motion</i>	346
3.4.2. <i>The kinetic-potential momentum</i>	347
3.4.3. <i>The kinetic-potential charge</i>	348
3.4.4. <i>The basic parameters of kinematic exchange</i>	349
3.4.5. <i>The moments of momentum and of kinema</i>	350
3.4.6. <i>The energetic measures of circular motion-rest</i>	350
3.4.7. <i>The total mass of motion of a material point along a circumference and the interaction laws</i>	352
3.4.8. <i>The moments, of current and momentum, of a rotating material point</i>	354
3.4.9. <i>The field at the rectilinear motion of a material point</i>	355
3.4.10. <i>The axial field in circular motion</i>	356
3.4.11. <i>The field of rest-motion in the circular nonuniform motion</i>	359

Chapter 8. THE PHYSICAL METRIC; THE UNITS OF DIALECTICAL PHYSICS AND CRUCIAL FAULTS OF THE MODERN SYSTEM OF UNITS 363

1. <i>The characteristic periods-quantas of the dialectical field</i>	363
1.1. <i>Basis and superstructure of the field of affirmation-negation \hat{D}</i>	363
1.2. <i>The Law of the Decimal Base</i>	365
1.3. <i>The gram</i>	366
1.4. <i>The centimeter</i>	369
1.5. <i>The centimeter and the second</i>	371
2. <i>SI and QuGCS units</i>	373

3. Correlation of the parameters of exchange with the parameters of electric fields .378	
3.1. <i>The errors of mixture of CGSE and CGSM parameters</i>	378
3.2. <i>The origin of dimensionalities with fractional powers of gram and centimeter</i>	382
4. The “leading” theoretical and phenomenological measures and their correlation .383	
4.1. <i>The units of current. The phenomenological and objective ampere</i>	383
4.2. <i>The units of charge. The phenomenological and objective coulomb</i>	387
4.3. <i>The units of potential. The phenomenological and objective volt</i>	387
4.4. <i>The phenomenological and objective units of E-vector</i>	388
4.5. <i>The phenomenological and objective units of B-vector</i>	389
4.6. <i>The phenomenological and objective units of B-vector flux</i>	390
4.7. <i>The phenomenological and objective units of resistance R</i>	390
4.8. <i>The phenomenological and objective units of capacity C</i>	391
4.9. <i>The phenomenological and objective units of inductance L</i>	392
5. The magnetic moments on the basis of current and circulation	394
6. The different forms of Coulomb’s law; the constants ϵ_{e0} and μ_{e0}	399
7. The vectors, D and H	402
8. On the definition of the ampere in SI	404

Chapter 9. AN ELECTRON, PROTON, NEUTRON AND THE PRINCIPAL PARAMETERS OF THE SUBATOMIC FIELD OF MATTER-SPACE-TIME

1. The principal quanta-parameters	409
2. The spectra of masses	415
2.1. <i>The masses in the longitudinal field</i>	415
2.2. <i>The masses in the transversal radial field</i>	419
2.3. <i>The masses in the tangential exchange</i>	420
3. The Balmer formula	422
4. The Rydberg constant and shear modulus	432
5. The Boltzmann constant and temperature waves	433
6. The coefficients of the relative changing of space	435
7. The moments of H-atom	437
7.1. <i>The magnetic moment of the neutron</i>	437
7.2. <i>The magnetic moment of the neutron shell (the electron shell of H-atom)</i> .	439
7.3. <i>The neutron resonance</i>	441
7.4. <i>The charge of the nucleon shell and the proton magnetic moment</i>	443
8. Electron’s parameters and the Dirac equation	446
8.1. <i>The relativistic epidemic</i>	446
8.2. <i>The theoretical parameters of the electron</i>	448
8.3. <i>Once more about the moments of electron</i>	450
8.4. <i>The proper magnetic moment and spin of electron; parameters of the central and transversal fields of exchange</i>	451

9. Waves and a current.....	453
9.1. Basic notions	453
9.2. The symmetrical definition of a current I	455
9.3. The circular wave motion and a current	459
9.4. A current in potential-kinetic fields of a circular pendulum and of a string.....	462
9.5. Some parameters of the wave field of gravitation related with the time wave of the fundamental tone	466
9.6. The parameters of a circular electron orbit and Einstein's and de Haas's experiments.....	467
9.7. The symmetrical formula of current and the Lorentz transversal interaction	470
9.8. The symmetrical formula of current and electrolyze	470
10. The electron waves-currents and the ambient wave field of matter-space	472
10.1. An electron on the orbit	472
10.2. An electron in the space of a conductor	475
10.3. The electron wave-beam and its parameters	478
10.4. The wave interaction and the wave current in the field of matter-space	482
11. The physical parameters of the man-wave and generality of the laws of dialectics	488

Chapter 10. ATOMIC SHELLS AND ORBITALS;

THE NATURE OF RADIATION

1. The wave field of H -atom at the micro and megalevels	495
2. Bohr's postulates and Planck's radiation formula	503
3. The atomic e - and n -orbitals	516
4. Geometry of atomic orbitals and molecular structures	522
5. Nucleon shells, Rutherford's nucleus, and ionizing potentials	533
6. The binding energy of nucleon nodes and nucleon shells	538
7. The absolute and relative energies of the interchange of H -units and basis space .	540
8. The electron (chemical) level of bonds	542
9. The fundamental frequency of the atomic field of exchange and the spectrum of electric resistances	545
10. The nucleon current and the Hall effect	548
11. The general structure of elementary optical spectra	551
12. Roentgen spectra	563

The grand survey 567

Appendix 577
